HOSPITAL REVITALIZATION PROGRAMME

The Hospital Revitalization Programme (HRP) is funded out of a National conditional grant which is administered by the NDOH. It seeks to improve the accessibility, affordability and acceptibility of hospital services through the modernisation of infrastructure, the provision of appropriate health technology, the delivery of quality health care in an efficient and effective way.

The programme has four components or fields of application:

Infrastructure Development: The right hospital at the right place, in impeccable condition and operating at the appropriate level in the context of PHC and Service Transformation Plan or rationalised service delivery platform;

Health Technology: Equipment in number and type appropriate for the level of care, and in a good working condition;

Quality Improvement: Provision of health care which satisfies end user's (status assessment, standard setting, auditing of processes and controlling of conformance to norms);

Organisational Development: Inputs, processes and management capacity which provides for an effective and efficient management of service (staff acquisition and development, organisational structure and functional analysis, strategic and business planning, development of policies and processes, performance management system, budgeting and supply chain management, financial management, information management, etc).

The provincial Project management Office (PMO) coordinates the planning, Implementation, Monitoring and control of the various components of HRP.
